

Lorette

Child Foundation Charity, Baptist Hospital Pastoral Care and renowned Dr. S. Anthony Wolfe will take on this meritorious case to improve this young lady's quality of life.

Her first surgery was August 11th at South Miami Hospital. Dr. Wolfe and his team will be performing approximately 4-5 staged surgeries over a period of months to remove these benign tumors and reconstruct her face.

Please follow her progress on our web site as we post periodic updates on her surgeries and recovery.

Update: December 2009 for Lorette

Lorette has now had a series of surgical procedures to remove the tumor as seen above. She will return in January for more surgery to help reconstruct the area from which parts of the tumor have been removed. This surgery has many phases and in between, Lorette must have some recovery time for her body to heal. This is the most recent photo since these procedures have begun. We hope our donors are as pleased with her progress as we are!
